

**ABSTRACT**

The present disclosure relates to a document notarization system and method. In one arrangement, the system and method pertain to accessing imaging data via a network, and electronically notarizing the imaging data. By way of example, 5 notarization can comprise modifying an original document by adding a stamp and/or a digital signature or generating a separate (or appended) notarization certificate. The present disclosure further relates to a network-based notarization service stored on computer-readable media. In one arrangement, the notarization service comprises logic configured to access a document stored in a personal imaging repository, and 10 logic configured to electronically notarize the document.
